ABSTRAC*

The sixth annual survey conducted by the Rural Services Institute examined the opinions of Pennsylvania residents on crime control, welfare reform, smoking, and education reform proposals. Sixty percent of respondents believed that the most urgent . issue facing Pennsylvania was violent crime and strongly supported measures to reduce the irresponsible use of guns, especially by minors. The majority of respondents supported welfare reform, but lacked a clear consensus about what actions would improve the welfare system. The majority of respondents believed that doctors should help terminally ill patients to commit suicide, were willing to pay higher taxes or higher insurance premiums to provide health care for uninsured residents, and favored a law that would require employers to provide health insurance for their employees. Additionally, the majority of respondents favored measures to reduce youth access to cigarettes. Respondents had mixed views on educational change issues, including providing condoms for high school students, allowing public school choice outside of resident district, and increasing the number of school days. Residents also responded to questions concerning property taxes, tax amnesty, and state income tax deductions for child care expenses. Responses to survey questions are broken down by rural/urban and regional residence, age, sex, marital status, parenthood status, educational level, political affiliation, and religious preference. Appendices include a map of rural and urban counties in Pennsylvania and a description of the survey sample. Contains maps and figures. (LP)

The Rural Services Institute

The Rural Services Institute (RSI) was established in 1984 as the applied research and community service arm of Mansfield University within the Division of Community Services and Continuing Education.

Our purpose is to share the resources of the university with the regional rural community. We encourage and assist students, faculty, and staff to meet the identified needs of business and industry, area students, local governments, and social service agencies.

Our mission is to engage in community service on behalf of the university and to be the applied research arm of Mansfield University.

How We will Accomplish Our Mission

In carrying out our mission we will:

- *strive for excellence in all our efforts;
- *apply the resources of the university to help solve community problems;
- *be committed to increasing the problem solving capacity of the region;
- *work at raising people's expectation levels and their self esteem;
- *assume the role of pointing out problems to the community;
- *act as a facilitator in helping the community reach solutions to their identified problems;
- *do applied research and pilot projects on potential solutions to these problems;
- *strive to enhance the image of Mansfield University;
- *seek to attain the goals set by the State System of Higher Education and Mansfield University.

CRIME CONTROL

Pennsylvanians say "crime" is the most urgent issue to be resolved.

Despite a recent drop in the actual crime rate, 60% of Pennsylvanians perceive "violent crime" to be the most urgent issue facing the state. In fact, they view it as far more urgent by comparison to "welfare reform" (22%) and "health care reform" (18%). As one respondent put it: "I'll worry about health care and welfare when I'm safe."

On specifically proposed legislation. Pennsylvanians support measures to reduce the irresponsible use of guns, especially by minors.

Crime, Handguns and Minors. By a strong majority, 90%, Pennsylvanians support a proposal to prohibit minors from possessing handguns except for lawful activities such as hunting and target snooting. Last year, such a law was passed in Colorado and in April, Gov. Casey proposed similar legislation.

Concerned about violence in schools. Pennsylvanians strongly (86%) support the expulsion of any student found carrying a weapon in school: and, a strong majority (75%) also support fining parents of children who bring weapons to school. In this regard, Gov. Casey has proposed to make it a felony for a parent to knowingly permit a minor to possess a firearm in violation of the law, and to make a parent fully liable for any willful act of violence committed by a minor with a gun if they had not taken reasonable precautions to prevent the act.

Gun Control. Overall, 77% support a ban on the sale of guns that are classified as semiautomatic assault weapons. Yet, in this regard should be noted that most respondents were not clear in their understanding of what

constitutes such a weapon. As one person put it: "I'm not sure what guns you're talking about, but I think they should ban guns that are just for killing people as fast as you can."

In addition to a statewide ban on semiautomatic weapons, 66% of Pennsylvanians — 74% in southeastern region of the state — also support legislation that would allow Philadelphia, Pittsburgh and other local communities to enact gun control laws that are stricter than state laws.

Punishment for Crime/Death Penaity/Innocence. Obviously frustrated by crime, 80% of Pennsylvanians support life imprisonment for anyone convicted of three violent crimes. And, indicative of their concern, 63% said that they are "willing to pay higher taxes to guarantee that violent criminals will not be released from prison until they have served their full sentences."

For serious violent crimes. Pennsylvanians strongly (71%) support use of the death penalty, but it should also be noted that 60% feel that instead of putting non-violent criminals in prison it may be better to put them under house arrest and monitor them through electronic surveillance. Interestingly, when asked "Out of every 100 people in prison, how many do you think are actually innocent?" 54% gave a figure of 5 or more. One person who felt that at least 10% are innocent expressed concern that fear of crime was leading to the imprisonment of too many innocent persons — especially minorities.

Public Willingness to Pay Higher Tax to Imprison Violent Criminals

Question:

"Are you willing to pay higher taxes to guarantee that violent criminals will not be released from prison until they have served their full sentences?"

Fig. 4 Alternatives to Imprisonment

Question:

"To reduce prison overcrowding and cost it has been proposed to place some non-violent criminals under house arrest and monitor them through electronic surveillance. Do you favor or oppose this idea?

^{*} Denotes question was purchased by the Pennsylvania House Republican Caucus. Source: Rural Services Institute, Mansfield University, May 1994

WELFARE REFORM

President Clinton has pledged "to end welfare as we know it." Conservatives, such as Charles Murray, want to simply "end welfare" while liberals, such as Frances Fox Piven, say there is a desperate need to "expand welfare" to curb a growing poverty in America. Among Pennsylvanians, most agree that welfare reform is needed, but except for a few proposals there is a conspicuous lack of consensus about what to do.

Require Six-Month Residency for Eligibility. A strong majority (83%) of Pennsylvanians support the imposition of a sixmonth residency requirement for eligibility. As one respondent put it: "Why should Pennsylvania taxpayers support non-residents?" Still, others are concerned that such a rule would lead to a harsh denial of people in need. As one respondent noted: "What about the children?"

Fingerprinting to Reduce Fraud.

Concern about welfare fraud has led California and New York to begin fingerprinting welfare recipients as a way to curtail individuals from drawing duplicate benefits under different names and/or from different states at the same time.

Pennsylvanians strongly support (82%) the use of fingerprinting, although some point out that such a practice should include assurances that civil liberties are not violated.

Random Drug Testing of Welfare Recipients. A clear majority (73%) favor random drug testing of welfare recipients as a way to reduce misuse of public assistance. As one respondent noted: "I think they should test so I'm not paying for drugs." However, here again, some people raised the question of civil liberties, and others doubted that random drug testing programs could be effectively implemented. One person said: "It's easier to say you're going do these things than do them."

Require Unwed Teen Mothers to Live with Parents. Several 1994 gubernatorial candidates have suggested such a requirement, however general public support is relatively weak (54%). Support is highest among the elderly (66%), many of whom apparently believe that such a rule would encourage parents to be more active in helping to prevent teen pregnancies. In addition, some elderly feel that such a rule would provide greater assurance that the child would be properly cared for. Young adults apparently are less inclined to accept such arguments. Support for the proposal drops to 42% among young adults.

Offer State-Funded Abortions for Women on Welfare. Only 44% of Pennsy Ivanians support the idea of the state paying for abortions if a woman is on welfare. Nonetheless, there does appear to be an increase of support. In the 1992 Public Mind Survey, though using a slightly different wording, it was found that only 35% supported the proposal. As in 1992, again, support was regional: strongest in the Southeast (51%) and weakest in the Northeast (32%).

Tighten Medicaid Eligibility
Requirements for the Elderly. In order to qualify for Medicaid, an increasing number of middle class elderly parents are transferring assets to their children — especially if it is expected that the parents will have to enter a nursing home. In fact, the growing number of such cases is cited as a major cause of the rising costs of welfare in Pennsylvania. Still, public opinion on the proposal remains split: 42% want tightening: 37% do not; 21% are unsure.

REDUCING ACCESS OF YOUTH TO CIGARETTES

Among Pennsylvanians, there is continuing debate about the rights of adult smokers. However, there is an emerging consensus about the need to curtail smoking by minors. Both Democrats and Republicans generally agree with proposals to reduce access of youth to cigarettes and other tobacco products.

Place Tobacco Products Behind Store **Counters.** An overwhelming majority (87%) of Pennsylvanians support a proposal to require that tobacco products be placed behind store counters. Advocates of the proposal, including Stephen Gambescia of the American Heart Association and William Godshall. Executive Director of Smoke-Free Pennsylvania, contend that such a regulation would serve as an effective deterrent to underage smoking because it would facilitate enforcement of laws restricting the sale of cigarettes to minors. Buyers would have to request and clerks could more easily ask for age identification. Moreover, one respondent noted: "It makes sense not to make it easy for kids to steal cigarettes."

Ban Cigarette Vending Machines. A strong majority (69%) of Pennsylvanians support having a ban on cigarette vending machines. Proponents of a ban. such as State Sen. Allyson Schwartz. contend that it is necessary because vending machines provide minors with an easy access to cigarettes. Opponents of the ban contend that adults should not be inconvenienced simply because of machine misuse by minors.

Ban Billboard Advertising of Cigarettes. The effectiveness of Joe Camel and other advertisements to attract young smokers is not well-established. Anti-smoking advocates contend that such advertisements are very effective in luring young smokers. while tobacco companies claim their advertising is really not very effective and that it certainly is not intended to attract young people. Apparently. Pennsylvanians believe that advertising is effective: A clear majority (68%) feel that billboard advertising of cigarettes should be banned. As one person put it: "Getting young people hooked is the whole idea of that Joe Camel stuff."

Prosecute Adults Who Give Cigarettes to Minors. A strong majority (67%) of Pennsylvanians favor the general proposal to prosecute adults who give cigarettes to minors. Respondents were not asked about what the specific penalties should be, but one respondent stated: "Any adult who gives a kid cigarettes ought to be shot."

Impose \$100 Fine for Underage

Smoking. Opinion is split on the proposal to fine underage smokers. Proponents contend that a fine would help deter smoking just as fines for littering or failing to wear a seat belt are effective. Opponents contend that fining and criminalizing underage smokers will simply distract from the real "criminals" — tobacco companies that are selling an addictive drug.

Define Smoking in the Presence of an Infant to be Child Abuse. In the 1993 Public Mind Survey. it was found that 45% of Pennsylvanians viewed smoking near an infant to be a form of child abuse. This year, asking the identical question, a slim majority, 52%, agreed. The seven percentage point increase is an indicator of increasing public concern about the adverse effects of passive smoking on children.

EDUCATIONAL REFORM

The 1992 and 1993 **Public Mind Surveys** indicated a conspicuous lack of public consensus about most proposals related to education. And again, this year, public opinion on proposals relating to education are best characterized as generally split. In fact, from a political perspective, the absence of consensus is clearly a major obstacle to educational reform in Pennsylvania. Survey results of the past three years imply the need for a strong leader in educational reform who is able to foster consensus.

Condoms in High Schools. In the view of some educators, the education process is being hampered by too many extracurricular activities. too much TV, too much drinking and drug use. too much dating and sexual activity, and too many pregnancies. Thus, on the latter matter, it has been proposed to distribute condoms in high school to reduce the spread of diseases and teen pregnancies. Still, when asked whether condom distribution in high schools should or should not be legal, opinion was split: 54% favored the proposal, 36% opposed, while 9% were undecided. And, among those supporting the proposal, many (39%) felt that the condoms should be given only with parental consent. Proponents of providing condoms are disproportionately (74%) young adults, with only (31%) of the elderly favoring the idea. Proponents were not asked whether the proposal should be implemented at the state or the local level; however, one proponent commented: "Some schools already provide condoms, while others don't. I think they all should have to."

Public School Choice Outside District of Residence. Only a slim majority (52%) of Pennsylvanians favor the idea of allowing parents to choose to send their child to a public school outside the district in which they reside. In

fact, when supporters of the proposal were asked if they would still support "choice" if its implementation would require an increase of taxes or more busing, under each condition, only 60% favored these proposals. In short, only 30% of the general public support school choice if it requires more taxes or additional busing.

Inc ease Number of School Days/ School Year. Recently (May 1994), the National Education Commission on Time and Learning concluded: "The six-hour, 180-day school year should be relegated to museums, an exhibit from our education past." Nonetheless, only 47% of Pennsylvanians support the idea of extending the school year. Support is stronger among urbanites (50%) than among persons living in rural areas (39%).

Vouchers. Overall, only 30% of Pennsylvanians favor the idea of "using state tax dollars to help parents pay the cost of sending their child to a private or parochial school." Among Catholics, 42% favor, compared to only 21% of Protestants.

Public School Funding. State Senator Chaka Fattah has proposed that public schools be funded through a graduated state income tax rather than local property taxes. A majority (54%) of Pennsylvanians agree with the proposal — more so the elderly and Democrats. However, opponents point out that such an idea would require amending the state constitution to allow a graduated income tax. They are also concerned that if the state pays for public education then local districts will lose too much control of it.

TAX REFORM

Fig. 12.

Tax Reform: Lowering Property Taxes'

Question:

"Do you support lower property taxes if other taxes must

be increased to make up for the loss of revenue?"

Respondents who responded "YES" were subdivided into two groups. Group A (N=396) was asked: "To make up the loss of revenue which of the following would be most acceptable to you: raise the income tax or raise the sales tax?"

Group B (N=334) was asked: "To make up the loss of revenue which of the following would be most acceptable to you: raise taxes on the money you earn and save or raise on the things you buy?"

FINDING: The choice of words makes a difference: fourteen percent (14%) would raise taxes on the money one earns and saves, but 33% would raise the income tax. At the same time, 67% would raise the sales tax, while 86% would raise taxes on the things one buys.

Denotes the question was purchased by the Pennsylvania House Republican Caucus.

Appendix A:

Regional and Urban-Rural Classification

With only a few exceptions, people living in a borough or township with a total population smaller than 2,500 people and not contiguous to a built-up urbanized area are rural residents, according to the U.S. Census Bureau. If at least half (50%) of the residents in the county fit this description, then the county is considered rural. The remaining counties are therefore considered urban. Based upon this definition of rural areas, the counties shown in white are considered mostly "rural counties", and the counties shown in grey are considered mostly "urban counties."

Appendix B:

The Sample

The sample was provided by Survey Sampling, Inc. It was a sample consisting of 4537 telephone numbers randomly selected from all listed telephone numbers in Pennsylvania. Of this number, 41% were completions, 32% were refusals, and the remainder were unavailable (no answer, answering machines, etc.).

The interviews took place between February 7 and March 9, 1994. Each interview took appreximately 10-15 minutes to complete. The sample closely approximates actual demographic characteristics of Pennsylvania.

Urban-Rural¹		
Mostly urban countie	s 79%	78%
Mostly rural counties	21	22
Political Affiliation ²		
Registered	50%	84%
Republican	43	43
Democratic	51	48
Independent/Other	6	9

In theory, in 19 of 20 cases the results based upon the sample will differ by no more than 2.4% percentage points in either direction from what would be obtained if all Pennsylvania adults with listed telephone numbers were contacted. The potential sampling error for smaller subgroups is larger. For example, for either Democrats or Republicans it is plus or minus 3.5% percentage points.

U.S. Dept. of Commerce. Bureau of the Census (1990).

²PA Dept. of State, for 1993 Municipal Elections.

Division of Community Services and Continuing Education
